Melbourne & Sydney, AU | 0448 084 678 | noahtui@gmail.com | [LinkedIn](#) | noahtui.com

PROFILE

Business Analyst who finds the real cause of a problem before being asked to. At ANZ, diagnosed where case handling time was actually going across 45+ regulated client cases a day and built the policy reference set behind a ~50% throughput gain for the team. At IB Tutoring Australia, traced student underperformance to tutor-to-student ratios rather than ability, doubling top grade-band attainment. Master of Project Management completed at RMIT (four High Distinctions). Trilingual (English, Spanish, German), strongest in unfamiliar systems where nobody has framed the problem yet.

EXPERIENCE

Small Business Consultant | ANZ, Melbourne, Australia

May 2025 – Feb 2026

- Managed 45+ client cases daily in a regulated banking environment (peaking at 60 on high-volume days), a ~50% increase on the initial 30-case benchmark as KPI targets rose four months into the role
- Elicited and documented what the team needed from a single policy and process source, building a reference set that cut per-case handling time and sharpened call targeting, the main driver behind the higher throughput
- Held one of the lowest case-escalation rates on the team, independently resolving complex policy scenarios within regulatory frameworks while sustaining accuracy as case volume rose
- Engaged cross-functional stakeholders on compliant resolutions and produced audit-ready documentation of resolution workflows

Academic Program Coordinator | IBT Education, Remote

Mar 2024 – Dec 2024

- Analysed student outcome data across 50+ subjects and, unprompted, traced underperformance in Spanish and French to tutor-to-student ratios (~8.5:1 against roughly 4:1 elsewhere) rather than student ability, recommending tutor reallocation, refreshed materials and subject-specific tutor guides
- Following implementation, top grade-band attainment in the two targeted subjects rose from ~30% to ~60% for the same cohort, the share finishing at band 5 or below fell from about a third to roughly one in ten, and the analysis prompted a recurring program-wide data-review process
- Produced structured reports and stakeholder-ready summaries translating cohort performance trends into clear recommendations for management

Private Tutor (IB) | IBT Education, Sydney, Australia

Jan 2022 – Dec 2024

- Assessed individual learning needs across 5 IB subject areas and designed tailored instruction plans tied to measurable performance outcomes
 - Maintained ongoing feedback loops with students and parents to refine delivery, demonstrating client-focused problem solving and adaptability
-

SELECTED PROJECTS | MASTER OF PROJECT MANAGEMENT, RMIT

- **Public-sector gap analysis, \$1.96B myki modernisation:** Built the Investment Logic Map for a 15-year contactless-ticketing contract and benchmarked PM maturity across six organisations spanning three government tiers, drawing on Victorian Auditor-General findings. Found the governance failure behind an 18-month standstill and a \$136.8M cost increase: schedule risk documented but accepted at contract award. Individual report; ILM contributed to the group component.
- **Stakeholder engagement on a \$1.6B rail program:** 9,866-word triangulated investigation into whether engagement genuinely shaped disruption management on the Caulfield to Dandenong LXP, or mainly justified decisions already made. Identified four linked weaknesses, including 17% pre-construction awareness among rail users and no measurement of commercial impact on traders; delivered five recommendations. Two-person group; led direction and research design.
- **Agile and Lean diagnosis of a content delivery pipeline:** Used value-stream mapping and bottleneck analysis to locate fragmentation across creative, production and tech workflows, then matched the framework to the constraint rather than applying Agile by default, writing user stories and acceptance criteria for the recommended Scrum cadence. ICAgile ICP earned in the course. Team leader of the four-person group; ran the value-stream and bottleneck analysis.
- **\$85M project financial model and risk appraisal:** Built a full 20-year project finance model in Excel, then wrote a second report to attack it: caught a discount-rate error in the first pass, restated the NPV, and ran a 10,000-iteration Monte Carlo. Project IRR of 13.68% sits between the 12.46% WACC and the 13.85% cost of equity, so feasibility turned on the rate chosen; 79% of runs returned a negative NPV, and DSCR stayed below 1.0 until year four.
- **noahtui.com:** Hand-coded portfolio site (HTML and CSS, no template or builder), all seven case studies.

EDUCATION

Master of Project Management

June 2026

Royal Melbourne Institute of Technology (RMIT) | GPA 3.4

High Distinctions in Project Risk, Project Leadership, Procurement & Ethics, and Research Design & Methods

Further coursework: Project Initiation · Financial Management & Appraisal · Information & Technology Management ·

Agile, Public Sector & Industry Project Management

Certification: ICAgile Certified Professional (ICP)

Bachelor of Arts, International Business & Germanic Studies

2023

University of Sydney

SKILLS & TOOLS

Analysis & Tooling

- Microsoft Excel
- Power BI
- Confluence
- SharePoint
- Microsoft 365
- SQL

BA Competencies

- Requirements Elicitation
- Root Cause Analysis
- Gap Analysis
- Process Mapping & Documentation
- Data Analysis & Insight Development
- Business Case & Options Appraisal
- Stakeholder Engagement
- User Stories & Acceptance Criteria

Methodologies

- Agile
- Waterfall
- PRINCE2

Languages

- English (native)
- Spanish (native)
- German (professional proficiency)
